 theshedcompany.com.au

Supplied Components

- Colorbond® Steel wall and roof sheeting
- BlueScope Steel portal frame
- Vermin proofing
- All bracketry, bolts, and screws provided
- Full engineering certification
- Construction plans

What is Excluded from the Kit

The Studio Shed kit includes the steel frame, bracketry, bolts, screws, and sheeting. However, you will need to source the doors, windows, flooring, and internal linings yourself, to achieve your desired vision.

Window Openings - 900mm(h) x 900mm(w).
Door Opening - 2100mm(h) x 1800mm(w).

The Studio Shed is a steel frame and cladding kit that gives you the freedom to finish the interior your way. Whether you're focused on style, functionality, or a balance of both—you're in control. Source your own doors, windows, linings, flooring and more to bring your ideal space to life.

Dimensions
4m x 5m x 2.6m

**Height is based on lowest eave.*

Council Approval

*The 20m² Studio Shed has been designed to meet the requirements of New South Wales' self-assessable building guidelines, and may not require council approval if you are building in NSW.

However, requirements can vary, so no matter where you're located, always check with your local authority to confirm what approvals may be needed in your area.

Studio Shed Assembly

The Studio Shed is recommended for individuals with prior construction experience and who are confident using tools. If you do not have experience in this area, we advise engaging a qualified builder or licensed tradesperson to complete the assembly.

Tools Needed for Assembly

If you're planning to assemble the shed yourself, keep in mind that some cutting and drilling will be required.

You'll need the following tools:

- Spirit level, measuring tape, clamps, metal snips
- Concrete hammer drill, impact driver, rivet gun
- Safety gear (gloves, glasses, etc.)

When Quality Counts, Count On Us.

ShedSafe Accredited

All sheds from The Shed Company are ShedSafe Accredited and undergo site specific engineering to ensure the safety of your structure. This accreditation guarantees the design and engineering of your shed meets Australian Building Standards.

Raised Flooring System Optional Upgrade

If you're after an alternative to a traditional slab floor, we offer a raised flooring system. With this upgrade, the shed is elevated on steel bearers and joists (fixed to concrete piers) allowing the flooring system to sit 600mm above ground level, giving you the flexibility to install your own flooring of choice. Concrete, floorboards, and associated fixings not included.

Steel Supplied by Bluescope

The Shed Company is committed to quality, and proudly manufacture our buildings from premium BlueScope Steel. Our sheds feature high tensile cold-rolled structural steel sections, manufactured from Galvaspan® Steel by BlueScope with a minimum of 450 MPa.

Galvaspan®
